

1 Declared audit claim and evaluation scope

Declared audit claim and evaluation scope

host, task, target-source unit,
intended semantics

2 Audit readouts under evaluation

Target artifact

SNI reliance
matrix D

**Prespecified
comparator**

TAP₀: training-free,
marginal

**Same-host
positive control**

permutation readout

**Alternative-host
readouts**

MF importance /
SHAP / permutation

common representation & row set; circularity exclusions

3 Five complementary evaluation axes with prespecified applicability

axis-specific reference evidence

1. Structural recovery

known generating adjacency

Synthetic generating graph

2. Stability alignment

repeatability vs host variation

Repeated runs + host behavior

3. Behavioral faithfulness

same-host ablation reference

Same-host intervention matrix

**4. Leakage-risk
discrimination**

controlled proxy challenges and
discrepancy controls; empirical
null rates reported

Proxy/null challenge sets

5. Resource cost

marginal & total, separate

Runtime/resource logs

4 Axis-wise evidence

**Axis-wise evidence: effect sizes, axis-appropriate
uncertainty**

prespecified non-compensatory rules
where defined; no composite score

5 Formal output

Axis-wise evidence profile (the formal output)

no cross-axis verdict rule is committed in
advance; any overall reading is a post-hoc
synthesis
